Design my home makeover level 101

Johnny brave of adding dimmers to finally say goodbye to 'do' furniture. 6 interior designers share their secrets quickly changing acts. Courtesy of Lesli DeVito we asked you to post ideas for converting a room on the beautiful home Facebook page. Here are some favorites. It takes a team of professionals to build a home theater. But you still have to pass on exactly what you want to them and expect from your entertainment space. To do this, you need to learn the essential elements to create a large home theater of design and planning to buy and install. To help you, we interviewed the following home theater experts: interior designer Charles Pavarini III, lighting designer Lana Lenar, and toxicologist Barry Reiner. Here's what they had to say about the room-shaped home theater space should be similar to the movie theater: enclosed, rectangular rooms. The shape affects how the sound bounces around the room so a completely square room or a room that doubles as long as it's wide can produce muddy sound patterns. Great room? About one and a half times as long as it's wide. And it should not be ideal for the best sound-enclosed quality of wide open acoustic rooms. Levels if you're building a high-line theater, you'll probably want curtained or upholstered walls and a carpeted floor. The soft surface reduces disrupting echoes. Sitting the distance of the seating place so the screen-to-eye distance is about two to three times the size of the screen (the screen size is typically measured on diagonal). The screen image appears sharpest when viewed directly. Lighting with a front forecasting system, setup lighting should be just shy of total darkness. There should just be enough light so the screen doesn't squeeze your eyes, but not enough to make a stunning one on the screen. The system alone will likely provide adequate lighting so people can move around safely, but to be safe you may want to consider installing task lighting along the floor. Beyond performance, lighting is a key element in home theater design. The room should be an inviting and comfortable space with a lighting system that determines the right mood for fun and relaxation. Essential electronics equipment needed for your home theater as well as prem on how to decode jargon technology. Video projector for the ultimate visual experience, it's all about a great, high-resolution image. To achieve this, you need a high quality projector at 720p (p progressive acronym) or for the best, 1080p. Note: Video projectors are best known for those with screens measuring more than 60 inches diagonal. If your screen is smaller, consider buying a plasma or rear plan TV. The size of the base thumb screen for display ratios is two and a third wider than that above. 16:9 is the language of measurement, meaning that if the screen is 16 feet wide, the screen must be 9 feet high. Speakers talk independently in front of the wall. Final audio performance, standalone speakers tend to be better. For a sleek look, the speakers on the wall are less obscure. Both can be good; it's just a matter of what matters: performance or what does it look like? Subwoofers answer the same speaker: sub-woofers independent winning performance contest; The wall sneaks ahead in the section appears. Surround sound formats basically mean having speakers around the room. Choosing the best surrounded format depends on the depth of the room. The most common system is called the Digital Dolby 5.1 and includes five speakers and a subtitle, two speakers on the front, one in the center, and two on the side (but towards the back), plus subtitles. For a very deep room, two additional speakers on the back wall help strengthen the extra space (7.1 Dolby Digital). Processors surrounded by processors surround the primary electronic component for controlling your home theater. They come in receivers all in one or as separate parts. Separately, they perform better, but they are costly and take up more space. If you have a pure audio, however, they are walking. Select video source parts from digital cable, satellite, DVD or Blu-ray video servers. Blu-ray is the best available. SE | UPuser equipment is the master interface of remote control. An integrated touchscreen is the preferred format. The shelf places the equipment in front of the equipment rack. Shelves may look better for your home theater, but rack equipment facilitates easier installation and makes it easier to service equipment problems and add upgrades down the road. If you think the rack will be a vision but like benefits, consider adding a closet to your design plan. Project planning project planning is a very important step in creating a home theater that ensures your expectations on your budget. Once settled, work with the interior designer and audio/visual expert to achieve the ultimate viewer experience. Planning, designing and building a home theater is a great project, but this guide should ensure that it won't be too big to deal with.
